Description Hi All, I am trying to integrate TestLink from Redmine. As instructed in the URL(http://www.redmine.org/plugins/rp-testlinklink) i am trying to map the test cases id. But whenever i try to map the proper test case id it is getting navigated to the below link which is not pulling any data. I want to know where to make changes in order to get the Testlink test cases. http://X.X.X.X/testlink/lib/testcases/archiveData.php?targetTestCase=1&edit=testcase
